

ABSTRACT

There is provided a mobile telephone (20) allowing a user to transmit minimal information to a counterpart if the user and the counterpart cannot make a verbal communication with each other. The mobile telephone (20) is connected to a network system for mobile communications accommodating a plurality of mobile telephones. The mobile telephone (20) includes a user information generation block (24) generating user information related to a condition of the user, and a communication block (22) connected to said user information generation block (24) to transmit the user information on the network system for mobile communications.
